Preface	vii
Acknowledgements	ix
Introduction and Background to ACES	xi
The ACES international cooperation: advances and challenges <i>P. Mora, A. Donnellan, M. Matsu'ura and X-C. Yin</i>	1
Working Group 1: Microscopic Simulation	7
Long-range stress re-distribution resulting from damage in heterogeneous media <i>Y.L. Bai, F.J. Ke, M.F. Xia, X.H. Zhang and Z.K. Jia</i>	9
Effect of heterogeneity on catastrophic rupture <i>F.J. Ke, H.L. Li, Z.K. Jia, M.F. Xia and Y.L. Bai</i>	15
Capturing physical phenomena in particle dynamics simulations of granular fault gouge <i>J. Morgan</i>	23
Statistical test of Load-Unload Response Ratio (LURR) signals by Lattice Solid Model (LSM): implication to tidal trigger and earthquake prediction <i>Y. Wang, P. Mora, C. Yin and D. Place</i>	31
The deformations and fracture features for granite block with v-shaped en echelon fault during biaxial compression <i>Z. Xu, R. Yang, J. Zhao and S. Chen</i>	37
Working Group 2: Scaling Physics	43
Intermittent criticality and the seismic cycle <i>D. Bowman and C. Sammis</i>	45
Mechanics of earth crust with fractal structure <i>A. Dyskin</i>	53

Does the scaling of strain energy release with event size control the temporal evolution of seismicity?	
<i>S. Jaumé</i>	59
A constitutive scaling law for the shear rupture that is inherently scale-dependent and physical scaling of nucleation time to dynamic instability	
<i>M. Ohnaka</i>	65
Using eigenpattern analysis to constrain numerical fault models - applications to southern California	
<i>K. Tiampo, J. B. Rundle, S. McGinnis, W. Klein and Y. Ben-Zion</i>	67
Ergodicity in natural fault systems	
<i>K. Tiampo, J. B. Rundle, W. Klein and J. Sá Martins</i>	75
Accelerating precursory activity in statistical fractal automata	
<i>D. Weatherly, P. Mora</i>	83
Critical sensitivity in driven nonlinear threshold systems	
<i>M. Xia, X. Zhang, X. Xu, F. Ke and Y. Bai</i>	89

Working Group 3: Macro-Scale Simulation/Earthquake Generation and Cycles **97**

From Mechanistic to Phenomenological Models: Integrated Forecasting and Modeling of Earthquake Dynamics	
<i>M. Anghel, Y. Ben-Zion and R. Rico-Martinez</i>	99
Long-term Crustal Deformation in and around Japan, Simulated by a 3-D Plate Subduction Model	
<i>C. Hashimoto and M. Matsu'ura</i>	111
Numerical simulation of seismic cycles at a subduction zone with a laboratory-derived friction law	
<i>N. Kato, K. Hirahara and M. Iizuka</i>	117
Synthetic Seismicity Models of Multiple Interacting Faults	
<i>R. Robinson and R. Benites</i>	123
Integrating NASA Space Geodetic Observations with Numerical Simulations of a Changing Earth	
<i>J. B. Rundle, L. H. Kellogg, K. F. Tiampo, W. Klein and P. B. Rundle</i>	129
Numerical investigation of fault bend influence on earthquake nucleation and development	
<i>H. L. Xing, A. Makinouchi and P. Mora</i>	137
Quasi-dynamic deterministic and stochastic modeling of earthquake failure at intermediate scales	
<i>G. Zöller, M. Holschneider and Y. Ben-Zion</i>	143

Working Group 4: Macro-Scale Simulation/Dynamic Rupture and Wave Propagation 147

Modeling of broadband strong ground motions observed for the 09/10/95, mw=8 Colima-Jalisco earthquake
M. Chavez and K. Olsen 149

Parallel 3d Simulation Of Seismic Wave Propagation: Observation And Simulations
T. Furumura..... 157

Application of Macro-Micro Analysis Method to Estimate Strong Motion Distribution and Resulting Structure Response
M. Hori and T. Ichimura..... 165

Guided waves from sources outside faults: an indication for shallow fault zone structure?
H. Igel, M. Fohrmann, G. Jahnke and Y. Ben-Zion 173

Finite-element simulation of seismic wave propagation with a voxel grid
K. Koketsu and Y. Ikegami..... 177

Critical Slip-Weakening Distance Inferred From Slip-Velocity Functions on Earthquake Faults
T. Mikumo, E. Fukuyama, K. B. Olsen and Y. Yagi 181

Direct Measurement of Slip-Weakening Friction from Near-Fault Strong Motion Data
K.B. Olsen, E. Fukuyama and T. Mikumo..... 187

On The Estimation of Dynamic Rupture Parameters
S. Peyrat, K.B. Olsen and R. Madariaga 193

Working Group 5: Computational Environment and Algorithms 199

A parallel implementation of the lattice solid model for the simulation of rock mechanics and earthquake dynamics
S. Abe, D. Place and P. Mora 201

Towards rapid geoscience model development - The Snark Project
B. Appelbe, D. May, S. Quenette, S. Tang, F. Wang and L. Moresi..... 213

Three-level hybrid parallelization of large-scale data visualization for The Earth Simulator
L. Chen, I. Fujishiro and K Nakajima..... 219

Simulations of the Burridge-Knopo model
J. Xia, H. Gould and W. Klein 225

MHD dynamo simulation using GeoFEM platform
H. Matsui 231

Parallel iterative solvers with the selective blocking preconditioning for simulations of Fault-zone contact	
<i>K. Nakajima</i>	237
Parallel performance of tectonic loading process model at transcurrent plate boundaries	
<i>K. Nakajima, C. Hashimoto and M. Matsu'ura</i>	243
Application of wavelets to the modeling, analysis, visualization, and data handling of complex geological processes	
<i>D. Yuen, G. Erlebacher, O. Vasilyev, M. Fuentes and D. Goldstein</i>	249

Working Group 6: Data Assimilation and Understanding 255

Paleoseismic and geologic data for earthquake simulation	
<i>L. B. Grant and M. M. Gould</i>	257
Spatio-temporal slip distribution around the Japanese islands deduced from geodetic data	
<i>T. Sagiya</i>	261
Spatiotemporal scanning and statistical test of the accelerating moment release (AMR) model using Australian earthquake data	
<i>Y. Wang, C. Yin, P. Mora, X. Yin and K. Peng</i>	265

Working Group 7: Model Applications to Space-Time Earthquake Hazard Quantification 271

Fault interaction in the Los Angeles basin and transverse ranges, Southern California, from elastic half-space and viscoelastic finite element models	
<i>M. Glasscoe, L. Kellogg, G. Lyzenga and A. Donnellan</i>	273
GeoFEM kinematic earthquake cycle modeling in the Japanese islands	
<i>K. Hirahara, H. Suito, M. Hyodo, M. Lizuka and H. Okuda</i>	279
Three-dimensional simulation for the earthquake cycle at a subduction zone based on a rate- and state-dependent friction law: insight into a finiteness and a variety of dip-slip earthquakes	
<i>H. Hirose and K. Hirahara</i>	285
Dynamic rupture simulation on geologically constrained segments of the Uemachi fault, Osaka, Japan	
<i>Y. Kase, H. Sekiguchi, H. Horikawa, K. Satake and Y. Sugiyama</i>	291
Block-spring simulation of earthquake cycle along the Nankai trough	
<i>N. Mistui and K. Hirahara</i>	295
Emergent anisotropy and flow alignment in viscous rock	
<i>H-B. Mühlhaus, L. Moresi, M. Cada</i>	301

Homogenisation techniques and Cosserat Continuum modelling of materials with microstructure	
<i>E. Pasternak and H-B. Mühlhaus</i>	307
Anomalous seismicity and AMR preceding	
The 2001 and 2002 Calexico Mexico earthquakes	
<i>C. Sammis, D. Bowman and G. King</i>	313
Aftershocks and damage mechanics	
<i>R. Shcherbakov and D. Turcotte</i>	321
Revisiting the tidal activation of seismicity with a damage mechanics and friction point of view	
<i>S. Smith and C. Sammis</i>	327
Crustal deformation model in Northeast Japan	
<i>H. Suito, M. Lizuka and K. Hirahara</i>	333
Exploring the underlying mechanism of LURR theory - reorientation of small faults as a possible mechanism of LURR	
<i>C. Yin and P. Mora</i>	341
Load-Unload Response Ratio (LURR), accelerating moment/energy release (AM/ER) and state vector	
<i>X-C. Yin, H-Z. Yu, V. Kukshenko, Z. Xu, Z. Wu, M. Li, K-Y. Peng and S. Elizarov</i>	349
Scaling of LURR critical region	
<i>X-C. Yin, K-Y. Peng, H-Z. Yu, Y. Wang, C. Yin and Y. Zhang</i>	359
Study on spatial and temporal variation of LURR in Southern California and its implication to earthquake tendency in this region	
<i>Y. Zhang, X-C. Yin and K. Peng</i>	365
